

## Tutorbin Front End Task

- For this task, you need to create a file viewer as mentioned in pictures and the video in the link at the bottom.
- Take any 7 file urls of your choice. The file types should be different and include all these formats - JPG, PDF, DOCX and TXT
- Show JPG files in IMG tag, TXT and PDF files in iFrame.
- For any other format, show a line saying "This viewer can not show <extension> files. Download to view"
- The viewer should contain a download button for each downloadable file.
- The viewer should contain a delete button for each file, clicking on which should pop a confirmation dialogue.
- The viewer should contain next and previous buttons to switch to the next or previous file.
- The viewer should be responsive for all screen sizes. For mobile devices, the bottom bar should display the active file in the middle. (Check video)
- The viewer should look like the one mentioned in the pictures.
